

Clavister Extended UTM™

Clavister SSP™ Security Services Platform

firewall • VPN termination • intrusion prevention • anti-virus
content filtering • traffic shaping • authentication

CLAVISTER™

Control Freaks

- **Advanced intrusion prevention**
- **Real-time antivirus scanning**
- **Powerful auditing**
- **Flexible web filtering**
- **Day Zero Protection**
- **Application Blocking**
- **High Performance – Low maintenance**
- **Anti Phishing**
- **Automated signature database updates**

Gateway Anti-Virus, Web Content Filtering and Intrusion Prevention Services

Clavister Extended UTM solution provides best-in-breed intrusion detection & prevention, web content filtering, anti-virus and anti-phishing to protect your business and valuable IT assets. The converged security solution provides your IT department with a toolbox which is easy to use, low on maintenance and scales as you grow.

All components in the Clavister xUTM solution are built to lower your maintenance as it increases the productivity within your company. The intrusion detection and prevention in-line system helps you to proactively stop application attacks such as worms and trojans. Web Content Filtering which is provided as a managed service puts you in control of the way your internet resources are being used. At the same time it also minimizes the exposure to malicious content.

Simply put: It helps you save money by increasing productivity and lowering bandwidth costs, while it makes your network more secure.

Clavister's unique stream-based antivirus feature is able to keep you protected against in-the-wild viruses by scanning files of all sizes and thousands of concurrent downloads. Kaspersky™ virus definition files are automatically provided to you by the Clavister Service Provisioning Network (CSPN).

Naturally we have kept the granularity and configurability, even on the xUTM solution, so that you can provision the policies and functionality that your business and network demands.

Features and Benefits

Advanced intrusion prevention, with thousands of attack definitions, protects you against application and content driven attacks as well as worms and viruses.

Real-time antivirus gateway that provides high performance protection against in-the-wild viruses, worms, trojans and other malicious content.

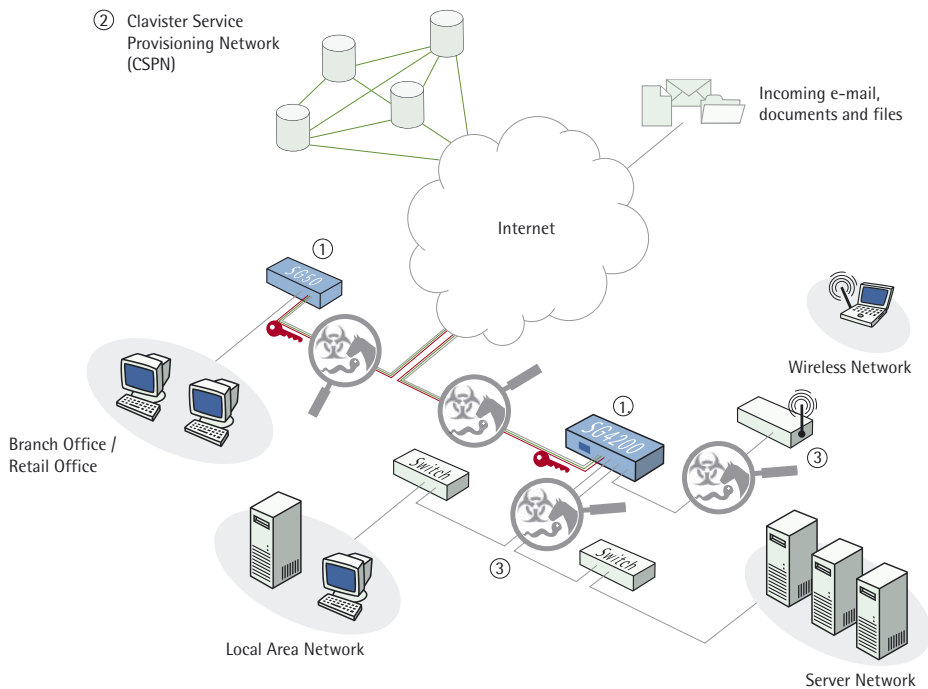

Spyware and Adware protection helps protect against programs that could transmit sensitive or confidential business data.

Zero-day protection.

Thanks to the highly unique component based signatures you are also protected against new and unknown attacks. Most importantly it is also capable of blocking variations of existing attacks without introducing false positives.

Clavister Service Provisioning Network (CSPN).

The global network of secure and high performance servers managed by Clavister ensure fast, accurate and safe delivery of IDP and AV signatures as well as classification databases for the managed web content filtering services.

- 1 High performance scan engine that protects you against viruses, worms, spyware, adware and other threats
- 2 Automatic updates of IDP and antivirus signatures as well as web content filtering classification services
- 3 Protection of both internal and external network traffic
